

Tune AV - Third-Party Audio/Video Rights Summary

Prepared for Apple App Review, Guideline 5.2.3.

Tune AV is a live radio player and station discovery app.

Radio Station Discovery

Tune AV uses the public Radio Browser API to discover publicly listed radio stations. Radio Browser documents that its API is free and open source and may be used in free and non-free software.

Source: <https://api.radio-browser.info/>

Radio Stream Playback

Tune AV plays public stream URLs returned by the station directory. Playback connects directly to the station or stream host. Tune AV does not host, upload, download, convert, record, cache, or redistribute third-party audio or video content.

External Music Links

Tune AV includes optional search links for discovered track metadata, including web search, YouTube search, Apple Music search, and Spotify search. These features only open search result pages. Tune AV does not access private catalogs, bypass access controls, embed unauthorized playback from those services, download media, or convert media.

Relevant Limitations

- No audio/video hosting.
- No recording.
- No offline downloads.
- No media conversion.
- No media extraction.
- No illegal file sharing.
- No DRM, login, paywall, or geo-block bypass.
- Saved music data is metadata only, such as title/artist and user favorites/recents.

Station availability, programming, stream quality, metadata, artwork, and rights remain controlled by each radio station or stream operator.
